

School Shelter

ABOUT THIS PROJECT:		
Market Segment: General Construction	Location: Zhytomyr, Ukraine	Products Used: Xypex Concentrate Xypex Patch'n Plug

A school basement in Zhytomyr was converted into a shelter to protect children during air raids. Persistent groundwater and rainwater infiltration caused excessive moisture in the space, creating uncomfortable and unsafe conditions.

To provide a dry, secure environment for children, a complete waterproofing solution was carried out. Xypex Patch'n'Plug was used to seal cracks, joints, and seams, followed by the application of Xypex Concentrate to waterproof the walls, ceiling, and floor.
