

# Basement Private House 4

## ABOUT THIS PROJECT:

<b>Market Segment:</b> General Construction	<b>Location:</b> Kyiv region, Ukraine	<b>Products Used:</b> Xypex Concentrate Xypex Patch'n Plug
--	---	--

Waterproofing a basement is always a complex undertaking. Xypex provides advanced materials that effectively eliminate leakage issues and ensure long-term protection.

The photo illustrates the process of waterproofing a basement intended for use as a shelter. The walls were treated with Xypex Concentrate, a crystallizing coating that penetrates the full thickness of the concrete, reliably sealing cracks and pores. All joints and leaks were sealed with Patch'n'Plug, a fast-acting waterproofing material that provides immediate protection.

Given the condition of the existing floor, a new concrete layer was poured with Xypex Admix. This crystalline additive penetrates the concrete, filling all defects and rendering the structure impermeable to water.
