

Mount Royal Tunnel Upgrade

ABOUT THIS PROJECT:

Market Segment:
Tunnels

Location:
Montréal, QC, Canada

Products Used:
Xypex Patch'n Plug,
Xypex Concentrate
Xypex Megamix II
Xypex Xycrylic

DESCRIPTION

The Mount Royal Tunnel upgrade in Montreal, QC, Canada, required an around-the-clock, seamless operation to address water leaks and patch cavities.

THE XYPEX SOLUTION

Xypex Patch'n Plug was selected for its quick-setting capabilities, immediately addressing water ingress. Xypex Megamix II was used to patch extensive cavities, offering a robust and durable solution. Over 2000 square meters of tunnel walls were coated with Xypex Concentrate and, enhanced with Xypex Xycrylic Admix, providing a superior waterproofing solution compared to traditional methods. This approach ensured permanent, effective waterproofing, of Xypex's non-toxic Crystalline Technology's global reputation for protecting structural integrity and resisting water leakage under extreme conditions.
