Precast Supplier
RINKER MATERIALS

Products
**BIO-SAN C500, MEGAMIX II
WITH BIO-SAN**

Project Type
PRECAST MANHOLES

Rinker Material made 5 manholes (48") and one manhole (84") with Xypex [Bio-San C500](#) at a 1% percent dosage rate to provide protection from microbial induced corrosion. These manholes will be incorporated into a factory's wastewater treatment system of a manufacturer of corn syrup, soybeans, oil and bio-diesel. The [Megamix II with Bio-San](#) was also utilized for filling mortar joints of the precast manhole segments. Bio-San C500 was dosed also in the concrete bench located at the bottom of the manhole.
